Smith and Moore Architects is an award-winning architectural practice widely recognized for residential design in traditional and modern styles, finding the origins of our design in the legacy of classicism. Founded in 1984, the firm has designed residences and boutique commercial projects in numerous regions and countries while focusing primarily on the island of Palm Beach.

We have developed a reputation for combining contemporary construction techniques with tested architectural traditions to create solutions that are not only timeless but meet the needs of modern-day living and our clients. Whether focusing on new construction, historic renovations or restorations, we are committed to designing projects that respect and enhance their surroundings.

We employ traditional methods of design, such as hand drawing and model making, while also embracing cutting-edge technology and computer design tools. We consistently utilize 3D modeling and 3D printing not only to help our clients fully understand our proposed solutions but also to help us further refine design ideas prior to construction.

Our collaboration with artisans and craftsmen is an essential part of every project. Employing the highest-quality materials and levels of finesse in design can only be successful with a universally-focused team.
